The SAMMY X-PRESS™ System is designed to provide direct attachment of threaded rod in metal deck (22-16 gauge) and thin gauge purlin (18-16 gauge), while providing reduced installation costs in terms of time and materials.

The X-PRESS Anchors eliminate the need for costly "armovers" in pipe hanging installations. Current methods offered for thin gauge purlin require use of a time-consuming retaining nut on the threaded portion of the fastener to prevent pullout and are not designed for use in metal deck. In many instances, access to the backside of the installed fastener is prohibited by panel liner or roofing insulation. SAMMY X-PRESS Anchors deliver the performance installers require without the use of a retaining nut!

The patent-pending X-PRESS Anchors consist of a threaded fastener and expandable sleeve. The XPress System features an easy-to-install anchor with expanding anchoring strips that collapse to prevent pullout after installation.

The XP 20 provides 750 pounds of pullout in 22-20 gauge metal deck and will support a 2" pipe. The XP 35 delivers 1250 pounds of pullout in 18-16 gauge purlin and supports a 3-1/2" pipe.
