

Product Name: Splash Guards
Product #: 15213

LynCar's Splash Guards help keep water in the tub and off of the bathroom floor, eliminating costly water damage and slippery areas. The accordion design, curtain clip, and industrial grade adhesive allow for a watertight seal on any tub. Fast and easy to install.

Surface Preparation - FOLLOW CAREFULLY FOR PROPER ADHESION.

Thoroughly clean tub and wall areas prior to application. Surface must be free of all soap film or residue. As a final preparation, use rubbing alcohol to remove soap and cleaner residue. Wipe area completely dry. Position Splash Guard in place and mark with a pencil.

Application - NOTE: USE ONLY PER LABEL DIRECTIONS.

There is one left and one right sided Splash Guard. To determine which one to use, note that the curtain clip should only be visible from inside the tub. From outside the tub you should only see the smooth surface of the Splash Guard.

If wall slants away from tub, place guard on flat surface and press on corrugation until the Splash Guard conforms to the wall angle (**see Illustration A**). If wall slants toward the tub, compress guard to conform to the wall angle (**see Illustration B**). Remove backing paper. Press firmly into place making contact with wall and tub at the same time. Extreme irregularities in wall or tub may require caulk.

To secure shower curtain, hold the area of curtain closest to Splash Guard, and gently slide the edge under the clip which rests on the side of Splash Guard facing the inside of tub.
